Re-imaging the Microdrive in the ML300 Evaluation Platform

Introduction

This guide takes you through the steps to re-image the Microdrive packaged with the ML300 Evaluation Platform (Part Numbers: DO-V2P-ML300, DO-V2P-ML300-WRS).

Disclaimer

Xilinx can not take responsibility for lost data or damaged hard drives.

Requirements:

- Microsoft® Windows® 2000 or Windows XP (the screenshots below are from Windows 2000)
- Successful ML300 CD1 installation
- Compact Flash or PCMCIA adapter for the Microdrive
- Unzipped Microdrive Image file in your c:\ML300 directory: md.img.v2pdk
- Image file from the ML300 lounge. You must register your ML300 first. [Link: http://www.xilinx.com/ise/embedded/ml300/members/index.htm]
- Backup copy of the Microdrive that you are imaging

Caution! If you do not make a backup copy of the Microdrive you are imaging, you will lose ALL the changes you made and ALL the data that you added.
Procedure

1. Make a backup copy of the Microdrive that you are imaging.  
   **Caution!** If you do not make a backup copy of the Microdrive you are imaging, you will lose ALL the changes you made and ALL the data that you added.

2. Browse to the area containing the drive number of the Microdrive.  
   Right click **My Computer → Manage**

   ![Figure 1: Path to Locate Microdrive Drive Number](Image)
3. Continue browsing.

Choose **Storage → Disk Management**

In the lower right window pane, locate the disk number of the Microdrive (MICRODR). In the example in Figure 2, the disk number is Disk 2, Removable 1.00GB Online.

![Figure 2: Locate Drive Number](image)

4. Start a V2PDK shell.

**Start → Programs → ML300 Evaluation Platform → V2PDK Shell**

![Figure 3: Start a V2PDK Shell](image)
5. From the V2PDK shell, start a bash shell.
   
   
   C:\ML300 → bash
   

   ![Image of bash shell]
   

   *Figure 4: Start a bash Shell*

6. Mount the Microdrive.
   
   **Note:** Replace the x with the drive number you found in step 1.

   bash-2.05a$ mount -b -s -f //./PHYSICALDRIVE\x /dev/hd0\x
   
   The example in *Figure 5* shows:

   mount -b -s -f //./PHYSICALDRIVE2 /dev/hd02

   ![Image of bash shell]
   

   *Figure 5: Mount the Microdrive*
7. Write the disk image to the Microdrive.

Caution! Make sure that you are imaging the correct disk! Choosing the wrong disk number will result in the loss of important data and/or in an unbootable system on your host machine!

Note: Replace the x with the drive number you found in step 1.

bash-2.05a$ dd if=md.img.v2pdk of=/dev/hd0x

The example in Figure 6 shows:

dd if=md.img.v2pdk of=/dev/hd02

Figure 6: Write Disk Image to the Microdrive

- This imaging process takes 15 to 30 minutes.
- Do not remove the Microdrive or close the V2PDK shell during this time.
- Try not to do anything else in the background because the more you do the longer the imaging takes.
You will know the process is finished when you see the output and bash prompt shown in Figure 7.

8. Unmount the Microdrive.

   **Note:** Replace the `x` with the drive number you found in step 1.

   ```bash
   bash-2.05a$ umount -s /dev/hd0x
   
   The example in Figure 8 shows:
   
   umount -s /dev/hd02
   ```
Procedure

9. Removing the Microdrive.

Caution! Before removing the Microdrive from your CompactFlash adapter or PCMCIA slot, always:

1. First tell your operating system to eject the disk;
2. Then wait for the prompt telling you that it is safe to remove the device.

In Windows, you can do this in the Unplug or Eject Hardware window, or sometimes you can do this directly in Internet Explorer by right clicking on the Removable Drive and selecting Eject.
