

Advisory 2001-01

JTAG Programmer Software Update Needed for XC9572XV and XC95288XV

Description: The current version of the JTAG programmer software (version 3.1isp8) does not correctly support the programming of the new XC9572XV and XC95288XV CPLDs. To ensure the proper programming of these devices, please update your software by downloading the JTAG programmer module from the latest version of the WebPACK software (version 3.3WP8.1).

To accomplish this, please follow these steps:

1. Go to the Xilinx WebPACK site at <http://www.xilinx.com/sxpresso.webpack.htm>
2. If you have never registered, please click on "Register for WebPACK ISE." After you have completed the registration process, click on "CPLD WebPACK download."
3. If you have already registered, or after you have completed registration, click on "Single File Download" and enter the User Name and Password for your Xilinx account.
4. Click on "Individual Modules."
5. Select "9500 Prog." in the right hand box under "Design Modules", then click "Download".

Please note that the next general release of the Foundation software will contain the corrected JTAG programmer software.

Products Affected: Only the XC9572XV and XC95288XV devices are affected.

Response: No response to this notification is required. For further assistance, please contact 1-800-255-7778, or open a WebCase at: <http://support.xilinx.com> (click on the WebCase link).
